

Carbon Reporting

Since 2008, we have disclosed carbon emissions data to the CDP. Each year, we have increased the boundaries of our reporting and/or become more refined in our reporting methodology. In 2010 we adjusted our reporting boundaries to include all locations in Canada and Mexico, a square footage increase of 12.6 percent. In 2011, we included some scope 3 (indirect emissions) activities. In 2012, we added two additional scope 3 categories (Use of Sold Product and Employee Commute). In 2013, we developed an industry-leading waste emissions calculator to measure the carbon impacts of our waste, recycling and compost programs. In 2014, we continually improved upon our reporting methodologies, increasing the accuracy of our inventory as well as our reporting frequency. This resulted in a perfect score of 100A.

The methodologies used to report our energy consumption include:

- The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition)
- U.S. EPA Climate Leaders: Direct Emissions from Stationary Combustion
- U.S. EPA Climate Leaders: Direct HFC and PFC Emissions from Use of Refrigeration and Air Conditioning Equipment
- The Climate Registry: General Reporting Protocol

Energy and GHG Data EN 3-7, 15-19

Key Performance Indicator	DATA
Energy consumption within the organization	Fuel consumption: 2,883,506,400,000,000 joules Electricity consumption: 1,074,586 MWh Total scope 1 & 2: 1,875,560 MWh
Energy intensity	0.0332275 MWh/Sq Ft
Reduction of energy consumption	34,415 MWh or 1.8% reduction year-over-year
Direct GHG emissions (Scope 1)	219,869 MT CO ₂ e
Energy indirect GHG emissions (Scope 2)	*354,451 MT CO ₂ e
Other indirect GHG emissions (Scope 3)	1,019,791 MT CO ₂ e
GHG emissions intensity	0.01017468 MT CO ₂ e/Sq Ft
Reduction of GHG emissions	*120,444 MT CO ₂ e, or 17.3% reduction year-over-year

*not including RECs
