

Appendix A:

CVS Health Corporation
Schedule of Total Scope 1, Scope 2 and Scope 3 (exclusively business travel)
Greenhouse Gas Emissions for the Year Ended December 31, 2017

Indicator Name	Unit	Amount
Scope 1 greenhouse ("GHG") emissions ^[a]	Metric tonnes (MT) of CO ₂ e	206,086
Scope 2 GHG emissions – location-based method ^{[b] [c]}	MT of CO ₂ e	1,131,013
Scope 2 GHG emissions – market-based method ^{[b] [c]}	MT of CO ₂ e	1,139,430
Scope 3 GHG emissions – exclusively business travel ^[d]	MT of CO ₂ e	36,636

[a] Scope 1 GHG emissions reported include direct emissions from stationary and mobile fuel combustion from natural gas, gasoline, diesel, jet fuel, propane, fuel oil, and refrigerants.

[b] Scope 2 GHG emissions reported include indirect emissions from electricity, steam, and chilled water.

[c] Scope 2 GHG emissions from electricity are calculated based on both the location-based method described by The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard Revised Edition and based on the market-based method as described by The Greenhouse Gas Protocol: GHG Protocol Scope 2 Guidance – An amendment to the GHG Protocol Corporate Standard. To calculate emissions per guidance in the Scope 2 amendment, CVS used supplier specific CO₂ emission factors where available for the states listed in **Note 2**. Supplier specific CH₄ and N₂O emission factors are not available and therefore emissions from these gasses are not included.

[d] Scope 3 GHG emissions reported include emissions exclusively from business travel (air and car) and are calculated based on travel data provided by a third-party travel manager.
